

Danish boat fitter chooses sustainability

Another prominent *boat fitter* is making the transition towards a sustainable future. Gesten Båadaptering ApS is the latest company to enter into collaboration with Esthec®. Gesten is currently still known for traditional teak decks, but that is about to change.

Gesten Båadaptering ApS is one of the largest *boat fitters* within the Danish boat industry. They have been installing bespoke high-quality decking on yachts since 1978 and well-known Esthec® customers such as X-Yachts and Danish Yachts are already amongst their regular clientele. The partnership with Gesten enables Esthec® to better serve the Danish market.

By choosing the composite decking systems from Esthec®, Gesten is taking a big step into the future. Owner Kenneth Kjeldsen:

“The durable material from Esthec® is the perfect alternative for traditional materials like teak. It is user friendly and customers have complete freedom of design.” Durability and design flexibility are not the only major advantages that Esthec® offers compared to teak. The composite Esthec decks are also extremely anti slip resistant and easy to clean.

Choosing a more durable deck material certainly does not mean a compromise on aesthetics. With the different deck and joint colours, the design options for an Esthec® deck are endless. The fact that Gesten has its own CNC machines ensures that the customized decks can also be delivered surprisingly quickly.

With Esthec®, Gesten Båadaptering ApS chooses a sustainable future.
