

Bolidt

INFORMATION BULLETIN

of Bolidt Synthetic Products & Systems
Hendrik-Ido-Ambacht / The Netherlands

The popularity of sports is unparalleled. As a result of this popularity, more stadiums, arenas and facilities are being constructed or refurbished. Modern day stadiums are not solely constructed for hosting sporting events but are multifunctional. A soccer match on Saturday and a rock concert on Tuesday, everything is possible in a modern and well-designed arena. But with the increase of activities, the use of the facilities intensifies. Whether it is a soccer match or a rock concert people have come to see, they all demand the highest standards when

it comes to the facilities they are visiting. Both the week in week out sports fan and the occasional visitor of cultural events need to feel comfortable, safe and at home in the same arena.

With this change in functionality and the impact of continual use by an enormous number of visitors the emphasis is now more than ever on the design, aesthetics, functionality and safety.

Bolidt Synthetic Products & Systems is a company that has always been very active in the development of synthetic systems that are able to withstand the (ab)use which is common for these modern facilities. From the birth of a new system to the actual installation on site, we are the “one-stop-shop” that offers all knowledge and expertise to complete the job.

With nearly 40 years of experience as an innovator, producer, supplier and installer of synthetic systems, Bolidt is able to offer a wide range of products, customized for specific needs that are common in and around sport facilities. It is no surprise that our customers are located all over the world. Coming from the Netherlands or Malaysia, from Portugal or Australia, from Scandinavia or the Caribbean and from Saudi Arabia to Germany. Ranging from the Olympic Stadium in Amsterdam to the ultra-modern arena of Schalke 04 in Gelsenkirchen, Germany. Worldwide solutions offered by one company.

Whether you look for safety and speed as an athlete, for durability and low maintenance as a manager, for design and functionality as an architect, for user-friendliness and a decorative appearance as a visitor or for safety and protection as an owner, the Bolidt Top Synthetics meet all specific wishes. In some cases the aesthetic and decorative aspects of the synthetic systems have evolved into a form of art. Clients, designers and architects work closely together to create optimal areas with superb conditions. An extensive range of colours and styles is available or they can be tailor-made, without losing the functionality and the characteristics of the synthetic system.

Think about it

• Athletic tracks

Our different synthetic tracks range from I.A.A.F. approved full polyurethane systems to training fields and game areas, liquid applied or based on durable sandwich systems

• Sports fields

Indoor and outdoor, from multi-purpose fields to tennis courts, with or without cushioning, various polyurethane systems for a variety of sports

• Concrete protection, renovation & conservation

On the stands, tribunes or on the superstructure itself, concrete needs to be protected from environmental influences; crack-bridging solutions, anti-corrosion systems, elastic materials, safe and wear-resistant...

• **Retractable pitch**

New techniques and features, like the retractable pitch in the Gelredome in Arnhem (the Netherlands) and the Schalke 04 stadium in Gelsenkirchen (Germany), have been developed and implemented using the knowledge and materials from Bolidt.

• **Concourse and promenade**

Colourful floor-finishes that are fire-resistant, slip-resistant, decorative and allow logos, designs or signs to be included, create a homelike and safe atmosphere. Both protective and comfortable, Bolidt can offer a wide range of possibilities.

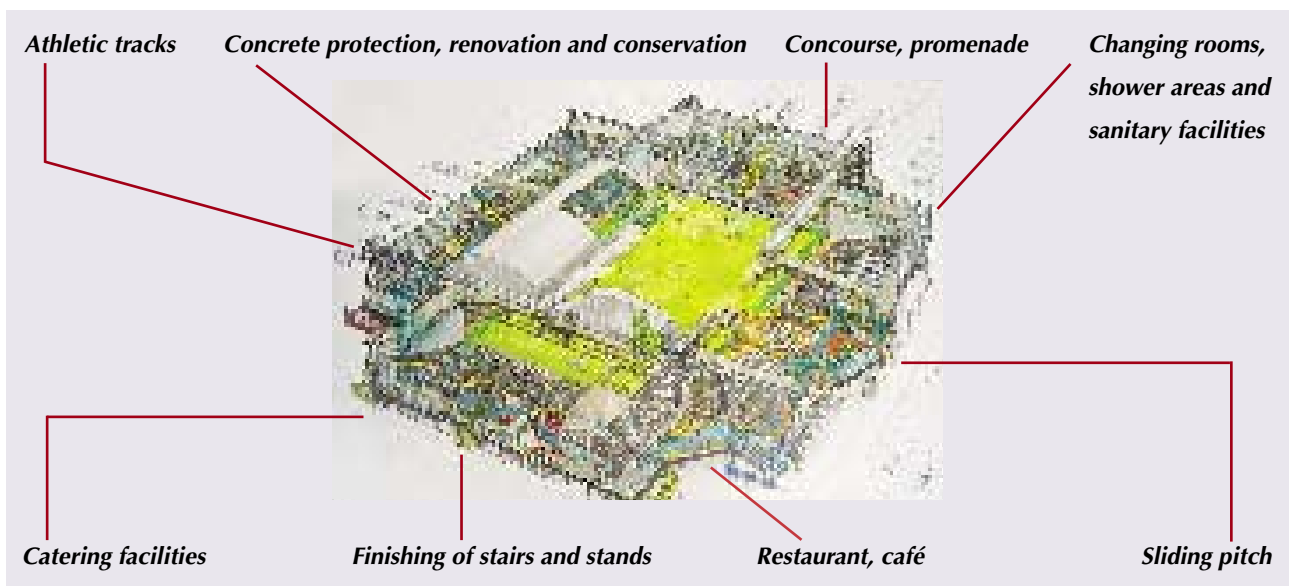

• **Changing rooms and sanitary facilities**

Hygienic, durable and easy to maintain floor-finishes that are seamlessly applied with an adjustable slip-resistance for the public areas or the players' rooms.

• **Catering facilities and restaurants**

Compliant with the most rigid international rules and regulations for food processing areas, different BOLIDTOP series can be offered, in epoxy or polyurethane. Again, seamlessly applied.

***Shops, outlets, indoor parking areas, fitness facilities and the list goes on
A modern stadium or arena is a town of its own.***

Bolidt Synthetic Products & Systems operates under one-roof, that is to say we are involved with the project from the development stages through the manufacturing to the final installation of the systems on site. Bolidt responds to new market trends and focuses on the specific client demands. The continuous development of new products is realised and closely monitored by our own R&D department. The materials are subject to thorough testing in the laboratory while our installation teams install them in a wide variety of different projects throughout the world. With its extensive range of solvent-free Top Synthetics, Bolidt is a welcome and highly regarded player in the international sports facility and stadium market.
