

Medochemie

The pharmaceutical industry has always been an important market for Bolidt. Medochemie in Cyprus is one example of a customer which is always coming back to us after expansion plans have been drawn. Now a renovation will take place...

With the wide range of product types manufactured, Medochemie Cyprus has many production facilities within the five manufacturing sites.

While they may have differing requirements, all have common factors. They are designed and operated in full conformity with the very latest GMP requirements.

Material and personnel flows have been carefully optimised and design and operating characteristics are such as to prevent cross-contamination and maintain control of correct environmental conditions. Modern production equipment, constructed and operated in conformance to GMP is standard throughout, with the very latest in microprocessor and computer control.

Together with validated production processes they ensure swift, consistent and efficient production. Spacious and environmentally controlled warehousing means that raw materials and finished products are available in adequate amounts, in the very best condition, ready for despatch wherever and whenever required. Seven years ago Medochemie has chosen Bolidtop 700 PT to their full satisfaction. Currently approximately 6.000 m2 has been installed and many m2 will follow. The buildings have been awarded with the Design Price by the Cyprus government by the way.
